Some tips to improve the score

- △ The model uses only 37 datapoints, adding meaningful datapoints might help to improve the model.
- △ Adding meaningful descriptors or replacing/deleting the least useful descriptors used might help. Feature importances are gathered in the SHAP and PFI sections of the /PREDICT/PREDICT_data.dat file.

How to predict new values with these models?

1. Create a CSV database with the new points, including the necessary descriptors.
2. Place the CSV file in the parent folder (i.e., where the module folders were created)
3. Run the PREDICT module as 'python -m robert --predict --csv_test FILENAME.csv'.
4. The predictions will be stored in the last column of two CSV files called MODEL_SIZE_test(_No)_PFI.csv, which are stored in the PREDICT folder.

REPRODUCIBILITY

This section provides all the instructions to reproduce the results presented.

1. Download these files (the authors should have uploaded the files as supporting information!):

- Report with results (ROBERT_report.pdf)
- CSV database (Robert_example.csv)

2. Install and adjust the versions of the following Python modules:

- Install ROBERT and its dependencies: `conda install -c conda-forge robert`
- Adjust ROBERT version: `pip install robert==1.0.4`
- Install scikit-learn-intelex: `pip install scikit-learn-intelex==2023.2.1`
(if scikit-learn-intelex is not installed, slightly different results might be obtained)

3. Run ROBERT using this command line in the folder with the CSV database:

```
python -m robert --ignore "[Name]" --names "Name" --y "Target_values" --csv_name "Robert_example.csv"
```

4. Processors, execution time, Python version and OS:

Originally run in Python 3.10.12 using Windows 10.0.22621

Total execution time: 213.83 seconds (the number of processors should be specified by the user)

CURATE

This module takes care of data curation, including filters for correlated descriptors, noise, and duplicates, as well as conversion of categorical descriptors.

The complete output (CURATE_data.dat) and curated database are stored in the CURATE folder.

Time CURATE: 0.6 seconds

----- Images generated by the CURATE module -----

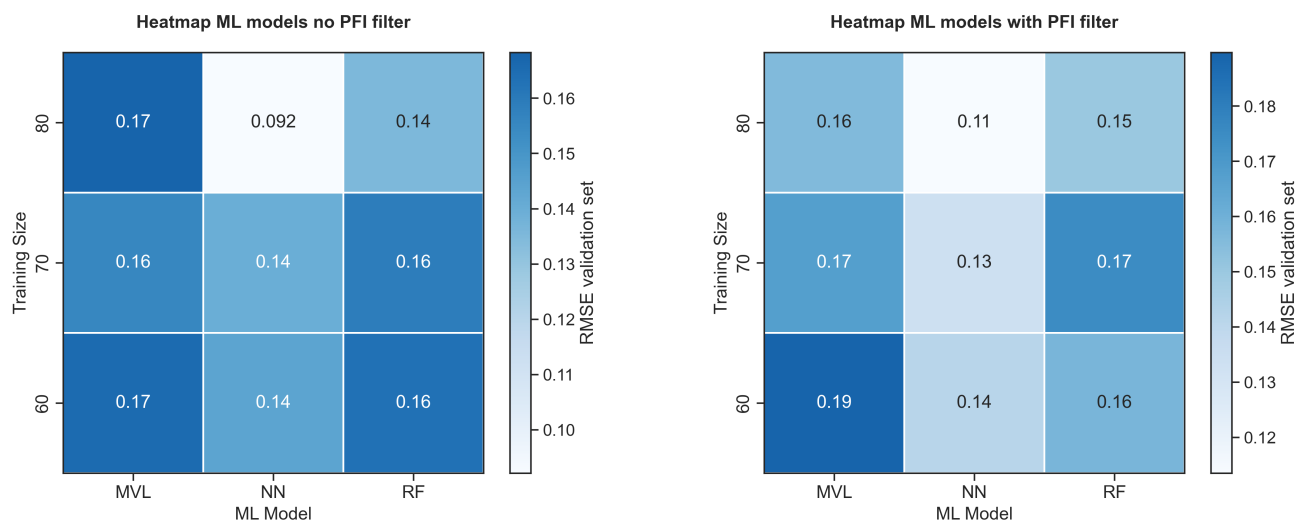

GENERATE

This module carries out a screening of ML models and selects the most accurate one. It includes a comparison of multiple hyperoptimized models and training sizes.

The complete output (GENERATE_data.dat) and heatmaps are stored in the GENERATE folder.

Time GENERATE: 189.84 seconds

----- Images generated by the GENERATE module -----

VERIFY

Determination of predictive ability of models using four tests: 5-fold CV, y-mean (error against the mean y baseline), y-shuffle (predict with shuffled y values), and one-hot (predict using one-hot encoding instead of the X values).

The complete output (VERIFY_data.dat) and donut plot are stored in the VERIFY folder.

Time VERIFY: 5.28 seconds
